Why—A Family Garden?

“The profit of the earth is for all.” For inexpensive food, for health, for recreation, a well managed garden is an asset to any family.

The fresh vegetables produced not only represent an important saving in the cost of feeding the family, but form a most healthful part of the diet. To the city dweller, also, the garden is a place of pleasant recreation.

A few packets of seeds, both vegetable and flower, costing a few cents, will supply the average family bounteously all summer. Grow them in those vacant spaces in the back yard.

HOW TO ORDER. We ask our customers to follow these instructions and fill out order sheets carefully.

ORDER EARLY. Kindly send in your order early; in the rush season of March and April there are unavoidable delays. Late buying is trying to you and more difficult to our over-busy staff. Perishable goods are sent at a suitable planting time.

POSTAGE PREPAID. On all Vegetable and Flower Seeds, Bulbs, Plants, etc., unless otherwise stated. The U. S. Mail delivers our seeds direct to your door. For Grass, Grain and Field Seeds, also other goods that are not priced “prepaid,” see Parcel Post Schedule on back of printed order blank, and on this page.

PRICES. Our prices are made on a very conservative basis. We hope you will look over our catalog carefully, comparing quality above all. (“There is hardly anything in the world that someone cannot make a little worse and sell a little cheaper, and the people who consider price only are this man’s lawful prey.”—John Ruskin.)

TERMS: Cash with order. Post Office Money Order. Express Order or Exchange on Denver; small amounts may be sent in clean postage stamps. Please do not ask us to ship C. O. D. unless you remit one-third of the order.

ERRORS. Yes, we make them, in spite of all care. Write us at once in full that we may make the adjustment to your entire satisfaction. Keep a copy of your order and use our printed order blank. Additional order sheets sent on request.

C. R. Root

President and General Manager

Forty years of experience in the Seed and Nursery business in Colorado.

TESTED SEEDS. We test all our seeds for purity and germination and have a large electrically-heated tester approved by our State Seed Laboratory.

GARDENERS. We usually have names of dependable experienced gardeners that we will gladly give to customers.

NON-WARRANTY. While we take all the care possible in selecting our seeds, shrubs, bulbs and plants, and we believe they will give satisfaction, we cannot guarantee them. All gardeners of experience know that success even with seeds of the quality of our **DEPENDABLE GRADE** depends largely on the weather conditions and proper cultivation, thus in common with all of the American Seed Trade Association, we, therefore, cannot guarantee the crop nor give any warranty, express or implied, as to their growth, description, quality or productiveness; and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned in the original, unbroken package and the purchase price will be refunded. If the seeds do not prove as represented by us we will replace with more or other seeds to same value.

If you have friends that would be interested in receiving a copy of our catalog, we will consider it a favor if you give us their names and addresses.

Parcel Post, Information

We pay postage on all Vegetable and Flower Seeds, except as priced on page 39.

We do not pay postage on Grass, Grain or Field Seeds, nor on Nursery Stock, such as Trees and Shrubs, unless stated otherwise.

We do not pay postage on Poultry Foods and Supplies nor Garden Tools, Sprayers, etc., unless so stated.

THE **PARCEL POST** rates are as follows: Owing to the convenience of having mail brought to your door by the rural delivery system, it is well to take advantage of the low rates.

20 pounds anywhere within the city limits of Denver for 17c.

20 pounds one hundred and fifty miles, 26c; and 1c for each additional pound up to 70 pounds.

ZONE RATES—When it is required that postage be added to the purchase price of any commodity note the distance you are from Denver, see in which Zone you live. It is then easy to estimate the exact amount of postage required, or ask your postmaster.

FOR PARCELS WEIGHING eight ounces OR LESS, containing seeds, bulbs or books only, the rate of postage to all zones is 1 cent for two ounces or fraction. (Over eight ounces the parcel post rates apply.)

When computing the cost of articles by Parcel Post, please consult this schedule:

New Early Royal Aster—Five separate colors and mixed in 10c pkts.

Asters—New Types

The queen of the summer-blooming plants. The Aster has progressed and improved by cultivation until many of the new varieties in their improved form bear a striking resemblance to the Chrysanthemum. The long stem makes them desirable for cut flowers as the blooms last long in water. Asters thrive in any good soil, prepared the same as for a crop of vegetables. Any extra care taken in the preparation of the soil and cultivation is repaid by larger and more beautiful flowers. They require a sunny exposure and a well enriched soil. Sow in hotbeds, pots or boxes in the house in March and April, transplant 18 inches apart after danger of frost is past. The seed can be sown in open ground in May. Cultural leaflet on request—**Asters**.

Early Royal. An early, large-blooming type with elegant rounded double flowers carried on very long stems.

Giant Branching—Improved Crego. Our stock is grown and carefully selected at the Bodger Farm where "Asters are King." They are improved to be very large, well branched, and on long stems. For home gardens they are next in quality to the New American Beauty type.

Pansies Favorites with all. For best results you must start with a good strain. The finest Pansies are, as a rule, shy seeders, which accounts for the difference in the price of the various mixtures offered.

Spring Planting. Seed should be sown in hotbeds or boxes, then transplanted to open ground after freezing is over.

As soon as the plants are up and large enough to handle, they should be thinned out or transplanted to stand 9 inches apart in the rows. Thorough cultivation should be given from the start, as Pansies will not thrive when obliged to share the beds with a mass of weeds. It is a mistake to plant Pansies in the shade of a tree or building. During dry weather the bed should be watered daily, and in extreme cases twice a day for the best results. Leaflet free upon request, **Pansy Culture.**

Fall Planting. Many gardeners prefer August sowing in hotbeds and besides the sash, covering well with straw, mulching with manure when winter sets in. Gradually uncovering on warm days in early spring. These will produce the early April blossoms.

Pansies are successfully grown from seed even by the novice; however, we recommend our full-blooming plants. Ready in April.

Petunias A garden without these favorites could hardly be called complete; there are few which equal them for effect. They commence blooming in July if sown outside in May, and continue to flower in great masses until destroyed by frost. Their culture is the most simple; any soil seems to suit them, while, of course, a good rich earth adds greatly to the richness of color. The various strains which we offer have been obtained from specialists, and we are confident that they will give satisfactory results. For early blooming sow early in the house and cultivate in small pots or flats till the weather has settled.

EXTRA FINE ZINNIAS

If only room for one flower, plant Zinnias.

A magnificent annual, known by all lovers of flowers, and without any question the most satisfactory plant for bedding. The flowers are produced in great masses during the entire season and from the time the first flower opens till frost destroys them, they are never out of bloom. The flowers are of various shapes, some looking like an Aster and others again like a Dahlia, and all have a richness and variety of color which is simply astonishing. They should be planted in masses, either in separate colors or in mixture.

Early Flowering Varieties and Special Mixtures

If you wish extraordinary and distinctive Sweet Peas select from page 8

Early Flowering or Winter Flowering Orchid Spencer Sweet Peas

These are a distinct strain of Spencer type flowers that bloom fully three weeks earlier than other Spencers. The original purpose in breeding up these varieties was for winter blooms in greenhouses, which has made wonderful change in Sweet Pea culture indoors. It was soon discovered that these same varieties would do equally as well in our gardens by producing fine, large blossoms considerably in advance of other strains. We recommend them for garden culture as well as for florists indoors.

SWEET PEA LITERATURE

Cultural Leaflet by C. R. Root free with orders, if asked for.

Spencer Varieties Mixed Sweet Peas—Silver Medal Strain

Too much cannot be said in praise of the merit of the mixture. We arranged with Mr. Waller, a very extensive seed grower in California, to supply us stock from his Silver Medal strain, which consists of many standard varieties of Spencers. To this we added some separate varieties that there may be a well-balanced assortment of colors. All these make it far superior to these so-called mixed which are grown-mixed and only a few colors prevail. Our mixture is a very distinct class.

Liberal packet 10c; oz. 20c; 2-oz. 35c; 1/4-lb. pkg. 60c; 1/2-lb. pkg. \$1.10; lb. pkg. \$2.00. All postpaid.

CULTURE. The seed should be sown as soon as the ground can be worked, in trenches 8 to 10 inches deep in a position fully exposed to the sunlight and air on both sides of the row. Cover with about one inch of soil, pressing it down firmly. As the plants grow, draw the soil to the plants until the trench is full. This method will give a long vine in the soil, which will make innumerable roots and gather nourishment and moisture through a dry spell. As soon as they are above ground, thin out to 2 to 4 inches apart to enable the plants to fully develop if you desire large flowers. They should be staked up either with branches of brush or stout stakes on which wire netting has been fastened. These should be at least 4 feet high. During dry weather water thoroughly and frequently. The flowers should be cut as often as possible to prevent the plants from running to seed which stops them from continuing to bloom.

Our prices are postpaid.

Hardy Perennial Phlox

Phlox Decussata. This class of Hardy Perennials is of special importance in every flower garden. Succeeds in almost any soil and blooms through a long season. This new list covers colors which are sure to please.

The best effects to be had with Phlox are produced by planting masses of each color, not less than six and even as many as two dozen or more plants together. For example, a border of Phlox may be planted, beginning with palest pink and shading up to dark cherry, then pure white, and white with a red eye, and more white, then a quantity of red and again white at the end. If in another border the shades of purple are planted with occasional bunches of white, the Phlox will be the pride of the garden. Our roots are large, 2 years old, field-grown. Figures at end of description indicate height in inches.

PEONIES ALL POSTPAID

The Peony ranks among the most popular flowers. The blooms come out very early and are seldom attacked by disease. Our roots are extra large. The most popular perennial for our home flower garden. Being perfectly hardy, one planting will do for a lifetime with suitable cultivation. Is strictly hardy and does well in most any location; however, responds readily to good rich, deep soil in an open, sunny position. Be careful not to plant too deep; the best is for crown to be about 2 inches below the surface. Peonies seldom bloom the first season; however, if planted in fall they usually bloom the following season. Ground should be spaded deep and well enriched, as suggested in our free leaflet.

Don't worry about the black ants that often gather on the buds, they are seeking the honey which exudes from the bud, and do no harm. If the stalk wilts, remove it to check the fungus from spreading.

Our Special Cultural Leaflet, "Peony Pointers," free with orders if asked for.

Our list contains varieties all distinct, suitable for Colorado culture.

Hardy Water Lilies

EVERY YARD CAN MAINTAIN A WATER-LILY POOL.
PLANT YOURS THIS SPRING.

These Water Lilies are perfectly hardy anywhere in the United States, growing wild as far north as Canada. They commence flowering early in the spring and remain in flower until late summer. The flowers mostly float on the water and are in shades of Pink, Yellow and White.

AN INEXPENSIVE WATER GARDEN

You can enjoy a water garden without the permanent investment of a concrete pool. Discarded water tanks, sawed off to the proper depth; old vats, tubs, bathtubs, barrels, trays, and other containers may be had for very nearly the hauling away. A large size galvanized washtub does very well. Visit the yards of a wrecking company. Patch leaks with hot asphaltum, which can be secured from any roofing company, applying when container is thoroughly dry.

Sink about 2 feet in the ground, in a sunny spot, filling one-third full of soil; plant, allowing one Lily for ordinary tub, other containers in proportion. Cover soil, which should be good garden loam, with sand or small pebbles to help keep the water clean. Pools 2 feet deep are standard, which allows for at least a foot or more of water over the plants. It is well to remember that the roots spread out laterally, not growing down very deep. Keep the water level fairly constant and the pool clean. Do not drain very often, but allow hose to flow in and overflow for an hour or so if pool becomes murky.

In May and June we can supply direct from a Western grower, assuring you fine clumps of white, pink and yellow-flowered varieties.

White—Marliacea Alba. Each \$1.00. **Pink—Marliacea Rosea.** Each \$1.00. **Yellow—Marliacea Chromatella.** Each \$1.50.

Our present stock gives you the cream of quality and merit

This very attractive flower has grown into popularity with marvelous rapidity. All lovers of flowers find a suitable space for many of the wonderfully distinct varieties. You can not afford to be without a liberal planting.

The Gladiolus are the most attractive and useful of cut flowers of all the summer flowering bulbs. The long, graceful spikes that carry fifteen to twenty buds may be cut soon as the first lower buds show color; then kept in water each successive bud will develop and thus prolong the blooming many days. No other flower is thus equal, nor as easy of cultivation.

The planting season starts in April, and continues until in June, at intervals of two weeks; you thus have flowers from late July until frost time. Best results are obtained in a sunny position and placing the bulbs fully six inches deep. Water freely.

A very complete **Cultural Leaflet on Gladiolus** free with orders upon request.

To Keep Dahlias As Cut Flowers

Cut the flowers late in evening or early in the morning, not during the heat of the day. Freshly-cut flowers will keep considerably longer, and wilted flowers, if not in too serious condition, will be entirely restored in appearance if the following suggestions are followed: Cut blossoms in early part of the day whenever possible. Fill receptacle with water, as hot as can be borne by one's hand. Plunge the stems, but not the foliage, almost their entire length into the water; let them remain in the water until it cools, then transfer into cold water as in usual manner, with the addition of a quarter teaspoonful of salt to a quart of water. If the stems are particularly hard and wiry, water near boiling point may be used to good advantage.

ABOUT GUARANTEE AND REPLACEMENT

While we cannot guarantee every plant or root to live, we do guarantee that each is in good condition when packed and shipped. Part of this risk is yours in giving proper care and culture. If ever there is a fault you think is ours, write us frankly; we will do our part. We must have our customers satisfied.

So much depends on the care in protecting the roots from exposure, delay in planting, careless planting, unfavorable weather conditions, thus consideration on purchaser's part will show that to replace all losses is injustice to us. Thus when there is an actual loss we replace at **Half Price**. Cultural leaflet free upon request.

Hedge Plants

We recommend only varieties that are hardy and thrive in Colorado. There really are but few varieties that are suitable.

Hardy Climbing Vines

There are many places around every home where vines can be used with satisfaction—on arbors, trellises, fences, stumps, etc. Do not overlook their importance.

Ampelopsis—Engelmanni—Clinging Ivy. Is very quick-growing. Its glossy, light green foliage clings to brick, stone or wood, changing to a beautiful crimson in fall. Usually free from insects. Is far better than Boston Ivy in this climate. The first year it seldom shows tendency to cling; after then it clings perfectly. **Each 35c; by mail 40c. 3 for \$1.00; by mail \$1.10.**

Ampelopsis—Veitchii—Boston Ivy. A very popular climber in the East for covering brick, stone or wooden walls, trees, etc. Slower than Engelmanni. **Each 60c; by mail 65c.**

Ampelopsis—Quinquifolia—Virginia Creeper. This common woodbine is useful on fences and arbors. Thrives anywhere. **Each 20c; by mail 25c. Doz. \$2.00; by mail \$2.25.**

Bignonia—Radicans—Trumpet Vine. A vigorous climber with trumpet-shaped crimson-orange flowers. It clings to walls. **Each 60c; by mail 65c.**

Clematis—Large Flowering. No other climbing plant equals in attractiveness these beautiful large-flowering Clematis. They need rich deep soil, perfect drainage though abundance of water. Their requirements are peculiar, and even then they will die occasionally. Be sure that the roots are properly spread out and earth comes in contact up under center of crown roots. Special instructions given with each purchase when asked for.

Jackmanni. Violet-purple, intensely colored, giant blooms—the grandest of all Clematis. **Each \$1.00; by mail \$1.15.**

Clematis, in 4-inch pots. These are fine-looking stock, all growing with 10 to 15 inches of healthy growth. All ready to set out. **Each \$1.25, for local trade. Not convenient to ship.**

Clematis Paniculata—Japanese Virgin Bower. Quite different from the above varieties. It blooms in fall with numerous small white star-like flowers that are especially fragrant. Very dense foliage. Very hardy and quick grower. 2-year-old roots. **Each 50c; by mail 60c.**

Clematis Coccinea—This is the old much-admired coral-flower blossom. The blossom is red outside, cream color inside. Very ornamental. **Each 60c; by mail 70c.**

Lathyrus Latifolia—Perennial Flowering Peas. The popular perennial flowering pea, called Hardy Sweet Pea; however, they have no fragrance. Usually supply pink and crimson. **Roots 25c; doz. clumps \$2.50; postpaid.**

Madeira Vine This old-fashioned popular vine is not hardy, though we place it in this list. Our tubers are Colorado-grown. Average size: **Each 10c; 3 for 25c; 12 for 90c.** Small-size tubers: **3 for 15c; 12 for 50c; all postpaid.**

STRAWBERRIES—FALL BEARING

We pay postage on Strawberry Plants and Small Fruit at these prices

Buy one-year-old plants and get them into the ground as soon as you can. Before planting, dip the roots in water. Set the plant with the crown or bud at the surface of the ground. April and early May is the best time to set the plants. If late May or June, the leaves should be trimmed. We do not recommend fall planting.

Everbearing varieties are now the leading kinds—in fact, so much can be said in favor of varieties that produce all through the summer and fall that we are discarding so-called Standard or June varieties and offer Everbearing varieties only.

For best results with Strawberries, give all-day sunshine and apply nitrate of soda or fine bone-meal fertilizer in June. Strawberry plants are packed 25 in a bundle.

Mastodon The best Everbearing known. The giant of all Everbearing. Produces heavily in July, then renews its productiveness in August and continues until freezing-up time. In late October last season we enjoyed boxes of these large delicious berries. The berries are very large, firm and uniformly well colored. Tests have been made where 18 berries filled a quart box. Three berries weighed 2 ounces. They have a very fragrant aroma. This is the coming strawberry. **25 plants for 75c; 100 plants for \$2.00; 1,000 plants for \$15.00; all postpaid.**

Progressive This variety has been in cultivation in Colorado for several seasons. Is not a large berry but produces continuously until killed by hard freezing. A very profitable market variety. **25 for 50c; 100 for \$1.25; 1,000 for \$10.00; postpaid.**

SMALL FRUITS

THESE PRICES ARE
ALL POSTPAID

These varieties are all of established merit and very suitable for our Western planters. Our stock is all examined by State Inspectors. We do not claim to grow this stock. We do, however, claim to have it grown for us by very responsible established Nurserymen who are honest in giving us the best they can produce.

Let us book your orders early and ship the stock as wanted. No extra charge for packing.

How To Reduce Cost Of Living

This question is of importance to us all.

One of the real practical ideas that is available to a big per cent of home owners is:

Have a Vegetable Garden!

Especially for the easy growing vegetables, such as Beets, Carrots, Lettuce, Radishes, Onions and Turnips. A very small space for each of these will surprise you with fresh stock for many weeks.

Should you have plenty of room, include two kinds of Beans, a row of Golden Bantam Sweet Corn, two or three hills of Cucumbers, with two rows of Peas, one early and one late, six plants of Tomatoes to train on stakes.

Instead of Spinach, have a short row of Swiss Chard.

A few hills of Curled Parsley also Garden Cress will provide Garnishes.

The Grand Rapids Loose-Leaf Lettuce will supply salads for many weeks.

To make the Home Garden a family affair keep the children interested by paying them for some of the vegetables they may produce. Give them an incentive to work for the home table.

—Get away from the so-called "depression!"

You should have a garden this year—It is economy!

BEETS *Fine Table Varieties*

Two ounces for 100 feet of drill.

The rows in which Beets are planted should be a foot apart. Along each row, in a furrow or small trench one inch deep, drop the seeds one or two inches apart; then cover with fine soil, pressing down firm. Beets should be planted sometime between the first of April and the first of June; they will be from a week to a month coming up, according to the weather. When the plants are about four inches high, thin out to from three to four inches apart. The plants pulled up can be planted elsewhere. Strip their outside leaves off, and put the plant in holes deep enough to keep the roots from turning up. Beets should be ready for eating in from eight to twelve weeks. Keep the ground loose and well tilled.

CABBAGE

Three ounces seed to 100 yards of row. One ounce will produce 2,000 plants.

The best way to raise Cabbage in the small garden is from the plants. Cabbage requires an abundance of both moisture and tilling. It is also advisable to enrich the ground if possible. Fertilizer may be conserved by placing a small amount under each hill before plants are set. It will pay you to set out both early and late varieties. Set early Cabbage 18 inches apart in rows and two feet apart between rows. Late Cabbage two feet apart in rows and three feet apart between rows. Cultural leaflet on request: **Cabbage and Cauliflower.** Tells how and when to plant seed.

If Cabbage seed is treated with **SEMESAN** it will help lessen the root rot.

Detroit Dark Red Beets

Copenhagen Market Cabbage

Pe-Tsai

Oxheart Carrot

Early Danish Perfection Snowball

Celery

Golden Bantam Sweet Corn

CAULIFLOWER

One ounce will sow a bed 40 sq. ft. and produce about 2,000 plants.

All our Danish seed is growers' first quality sifted seed, thus higher cost. For the small garden we advise getting Cauliflower plants in preference to growing from seed. The cultivation is the same as that of Cabbage, except that Cauliflower favors even a moister soil. Proper tilling and watering affect this very much. Tie the long leaves together over the growing head to keep it white. Plants ready in April and May. Cultural leaflet on request.

Early Danish Perfection Snowball

"Dependable Grade." Positively nothing better for earliness and quality; produces fine white heads. The outer leaves are short, allowing the plants to be set closer together than most varieties, 18 to 20 inches being far enough apart. Pkt. 15c; ¼ oz. 75c; oz. \$2.00; ¼ lb. \$7.00.

Late Snowball or Dry Weather.

Danish-grown sifted seed. Pkt. 15c; ¼ oz. 75c; oz. \$2.00; ¼ lb. \$7.00.

EARLY PARIS. Medium size; second early; French stock. Pkt. 10c; ¼ oz. 35c; oz. \$1.00; ¼ lb. \$3.00; lb. \$8.00.

Treat your Cauliflower Seed with Semesan. It will help germination and eliminate excessive "damping off."

CELERY *Crisp and Tender*

Three ounces of seed to 100 yards of row. One ounce will produce 7,000 to 10,000 good plants.

Celery, to be raised from the seed, requires almost expert care. It is better for those who are not practical gardeners to buy Celery plants. These are set out about the first of June, a foot apart, and mature along the last of September or during the first two weeks of October. Celery is by nature a marsh plant, and the soil about it must be kept wet, especially when the plants are young. When they get to be about four inches high, shear off the tops; it makes the plant more stocky. As the plants grow, gradually draw the earth up around them to keep the stalks white; by the end of fall all should be covered but the tops. A heavy paper wrapped around each stalk will insure tender, white plants. Keep the ground well loosened and cultivated; this is imperative on account of the moisture required by the plants. Celery is planted in rows that should be at least three feet apart. About 30,000 plants to the acre. Cultural leaflet on request.

SEMESAN will help to increase your celery crop.

Golden Self-Blanching

"Dependable Grade." French-grown seed. The choicest sort of delicious Celery; produces large bunches with broad, heavy stalks which blanch into a rich, appetizing golden-yellow, making this the most popular golden Celery on the market. Pkt. 10c; ¼ oz. 25c; oz. 75c; ¼ lb. \$2.25.

GIANT PASCAL. Standard market sort for winter use. Pkt. 5c; ¼ oz. 10c; oz. 30c; ¼ lb. 90c.

CORN, SWEET

One pound will plant 100 hills. 10 pounds an acre.

SEMESAN TREATMENT on your Sweet Corn Seed will increase germination.

Corn should be planted to the north of the garden, so as not to shade the other crops. It should not be planted in a very small garden unless it is the only crop to be raised. It needs shallow but continual tilling. Just after the middle of May is a good time to plant. The rows should be three feet apart, the kernels sown three together every six inches in the furrow. When the Corn is well started, pull out all but one stalk to each place. Keep the little shoots or suckers cut from around the roots. The ears are ready to pick when the silk is brown and the kernels on the tip are plump. Do not molest the ears of growing corn; it is liable to spoil them.

Prices for all varieties: Pkt. 5c; ¼ lb. 10c; ½ lb. 15c; lb. 25c; 2-lb. pkg. 45c.

Golden Bantam

"Dependable Grade." Select strain of exquisite quality; when ready to use is of a bright golden-yellow color. It can be planted very early, is hardy. The small stalks can grow very closely together in the row and will produce 2 to 3 ears each. We especially recommend it on account of its ability to stand the cold weather of spring.

EARLY MAYFLOWER. Unquestionably the earliest white kernel variety in existence. Ears are 8 and 10-rowed, 5 to 6 inches long, average 2 ears on a stalk, growing only 4 to 5 feet high.

EARLY EVERGREEN. Similar to Stowell's, though medium early; good quality.

EARLY MINNESOTA. Early standard variety of medium size ears.

One ounce will plant 50 hills. Two pounds will plant an acre.

Dig holes at least five feet apart. They should be a foot wide and five inches deep. Fill each hole to within an inch of the top with equal parts of sand and well-rotted stable manure thoroughly mixed. Scatter at least ten seeds in it, well apart, and cover them with half an inch of fine soil, pressing it down. From the middle to the last of May is planting time. Thin out to three plants to a hill. Our seed is all Colorado-grown.

Use **SEMESAN POWDER** on your Cucumber Seed to increase germination and prevent leaf blight. **"HOTKAPS"** are excellent protectors from late frosts. Have them ready for your cucumbers.

Clark's Special Deep Green "Dependable Grade." This strain is the result of years of selection. Averages 8 to 10 inches long, which is a good marketable size. New York or Wonderful Lettuce

Perfecto Improved

LETTUCE *All Select*

One ounce for 200 feet of row. One ounce of Head Variety will plant 400 feet of row. Lettuce will stand slight frosts, and is therefore one of the first things to plant; if the ground is well prepared, early April is not too soon. It can be planted up to the middle of July, and many prefer the later plantings. Place seed in trench half an inch deep, cover with fine soil to top of the trench and press the soil down. The plants should be up in about a week. If head varieties are wanted, thin out to four or five inches. The heads are usually well formed in ten weeks and should then be cut or they will rapidly go to seed, especially in hot weather. The rows of lettuce should be at least a foot apart. The quality of the lettuce depends on the tilling—keep the hoe busy. A special cultural leaflet on **Lettuce Growing in Colorado** free upon request.

*These varieties form heads.

***New York or Wonderful** "Mountain Iceberg," Dark Iceberg, also called **Los Angeles Market**. "Dependable Grade."

This grand lettuce we believe to be the finest in cultivation. A wonderfully heat-resisting lettuce and slow to run to seed, mammoth heads, like small cabbages, bright green. Our seed is direct from certified stock grown in California by Rohnert. **Pkt. 5c; oz. 20c; ¼ lb. 60c; 1 lb. \$1.75.**

***No. 12 Early Mountain Iceberg** A new strain of the New York or Wonderful that is earliest of all head varieties, thus especially suitable for growing in high altitudes. Produces a good average of very large round, solid, heads. Resists hot weather and ready for market in 60 to 70 days. Big lettuce growers use this now extensively. **Pkt. 5c; oz. 25c; ¼ lb. 75c; 1 lb. \$2.25.**

MUSKMELON OR CANTALOUPE

One ounce for 50 hills, 3 pounds per acre.

Muskmelon planting and cultivation throughout are the same as those used in raising Cucumbers. Is considered rather delicate for northern latitudes, but with care can be successfully grown. Starting the plants in pots or small strawberry boxes indoors and then setting out after frost is over gives early production. The pleasure of raising them is worth the effort.

Our Melon Seeds are all taken from carefully selected specimens.

Hale's Best ROCKY FORD CANTALOUPE. This strain is now acknowledged by the leading Rocky Ford growers to be the most profitable. Its earliness puts it ahead and its firm flesh makes it an excellent shipper. Salmon color, slightly oblong, deeply netted. **Pkt. 5c; oz. 15c; ¼ lb. 45c; 1 lb. \$1.35.**

Perfecto IMPROVED. Very uniform in size, nearly round, and densely netted. The flesh is a very thick salmon color, shading to green with exceedingly small seed cavity, therefore very desirable for market. It is the most popular variety in the Rocky Ford district. Is second early. **Pkt. 5c; oz. 15c; ¼ lb. 45c; 1 lb. \$1.35.**

POLLOCK'S 10-25 SALMON TINT. "Dependable Grade." This is considered a very satisfactory strain of the Rocky Ford types of Cantaloupe. It produces heavily netted fruits of uniform size. Flesh is green, shading to salmon tint. Very strong rust-resister. Cantaloupe growers may rely on this strain. **Pkt. 5c; oz. 15c; ¼ lb. 40c; 1 lb. \$1.25.**

Greeley Wonder Muskmelon—Golden Queen. Is a salmon-orange flesh and very thick meat. They grow 4 to 6 pounds, 6 to 9 inches diameter, and very prolific. Shape is slightly flat, partly netted, very deeply ribbed. Very popular in Denver market. Many prefer it to Rocky Fords. Don't fail to plant Greeley Wonder. **Pkt. 5c; oz. 15c; ¼ lb. 40c; 1 lb. \$1.25.**

Large Cheese Pumpkin

GARDEN PEAS *Sweet and Tender*

One pound will sow 50 feet, 90 pounds an acre.

The furrow for Peas should be four inches deep. Sow the seeds one inch apart and cover with one inch of fine soil, thus leaving part of the furrow unfilled above them. This is to be filled gradually with fine soil as plants grow, until the furrow is filled level with the ground. By this method, the sun can warm through the soil to the roots. Peas can be planted as soon as the frost is out of the ground; the rows should be two and a half feet apart. Plant the climbing varieties near a fence and train them on wire netting. Our seed all Western grown.

We pay all postage on Peas at these prices.

TOMATOES *Delicious*

One ounce will produce 1,500 plants; ¼-pound to transplant for one acre

Tomatoes are planted indoors in a window garden about the first of March. When the third leaf of a plant has formed, put the plant into a three-inch pot or box. After all danger of frost is over the plants may be set in the ground. Do not plant Tomatoes within three feet of any other crop. Dig holes three feet apart and deep enough to allow placing the plant an inch or two deeper than it was in the pot. Cover the top of the pot with your fingers, holding the stem of the plant between them; then turn the pot upside down, tapping it with a trowel or other tool, when the plant will easily come out. Place it in the ground, pressing fine earth around it; if the earth is dry, water it as soon as the plants are set. Some people, before transplanting Tomatoes, put a narrow ring of heavy paper loosely around the plant, just at the top of the soil, to keep off cutworms. June 1st is the usual time for transplanting in northern latitudes. Tie the growing plants to stakes. We will have plants ready in May and June.

Tomato Seed should be carefully treated with **SEMESAN POWDER** to prevent wilt.

TURNIPS *Sweet and Fine*

One ounce for 150-foot row; 2 pounds for one acre.

Plant Turnips between the first day of May and the last of July, in rows a foot apart. A quarter-inch of soil is enough to cover the seed. The plants should be thinned out to about five inches apart. Late turnips are generally considered the best. They should be taken out before the first heavy frost, in the fall, and can be packed in boxes of sand to keep all winter.

It is one of the best turnips on the market. Has a bright purple top, white underneath. Leaves are short, narrow and erect. Flesh white, fine-grained and of mild, pleasant flavor. Matures in eight or nine weeks. **Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c.**

PURPLE TOP WHITE GLOBE. Much larger than the Purple Top Strap Leaf. A little later and a much better producer. Much liked in Denver market. **Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c.**

Seed Corn Suitable for Western Planters

BOOK—"Seed Corn, do you know that it will grow?" 30 pages with illustrations. Well worth the price of 15c. **Free** with Seed Corn order of \$2.00 or more if asked for when ordered.

8 to 10 pounds will plant an acre. Prices for Corn do not include postage.

Probably no other field crop is more sensitive to acclimation than Corn. Years ago we learned by experience that Corn responds more quickly to selection and acclimation than had previously been considered; thus it is that we now insist on Colorado-grown seed. The higher altitude in which seed matures the better it is for our Colorado use. Accordingly we have selected for purity in type, productiveness and hardness.

Prices for the following select strains of Field Corn: 1 lb. 15c; 2 lbs. 25c; 5 lbs. 50c; 10 lbs. 85c; 25 lbs. \$1.50. 100 lbs. \$3.50. Postage extra.

For larger quantities, see Pink Sheet price current.

Copper Carbonate and Blue Vitriol for killing smut in grain seeds, see page 43.

MINNESOTA NO. 13. A truly very desirable variety of Yellow Dent. The ears are of handsome appearance, being 16 to 20-rowed, wedge-shaped kernels, growing closely on the cob from butt to tip. Every kernel a good one. The ears are eight to ten inches long, averaging two on a stalk. Matures readily in ninety days; if unfavorable conditions, a hundred days will usually mature it. Is proving itself an excellent drought-resisting variety. We predict that more Minnesota No. 13 will be grown in Colorado than any other variety.

COLORADO YELLOW DENT. For years this name has applied to a good grade of Yellow Dent corn that has been grown in Northeastern and Eastern Colorado. The ear is longer than Minnesota No. 13 but not as large either in kernel or cob. Its chief recommendation is hardness and reasonably sure cropper.

COLORADO WHITE DENT. Originated near Parker and has been very successfully cropped on the Divide for years. By all means the best White Dent corn for Colorado, being 12 to 16-rowed, large, broad kernel.

WHITE AUSTRALIAN. A flint variety, exceptionally hardy and early. Long ears, 8 to 10 inches, usually 8-rowed. Will mature where others fail. Especially desirable on very dry land and high altitudes. The old reliable for dry-land farmers.

FERTILIZERS *Feed your soil---it will feed you*

The more our soils are cropped the more attention should be given to replenishing the soil fertility in the form of commercial fertilizers. We urge all planters to consider the needs of their soil.

All fertilizers in large sacks cannot be sent by mail; must be transported by express or freight at purchaser's expense. Articles marked (*) can be forwarded by mail when sufficient funds for postage are added to the order.

Odorous fertilizers are not permitted in U. S. mail. Only sealed or carton fertilizers are permissible.

FIRST It is quick-acting. A plant food in such form that grass, flowers and vegetables are able to use it and benefit by it **immediately.** You don't have to wait all season for results.

Granulated PEAT MOSS

The all-purpose Fertilizer, Ground Cover, Mulch and Soil Rejuvenator.

**IMPORTED FROM EUROPE
WE HAVE THE GENUINE**

For the information of those who may not be acquainted with the composition of Granulated Peat Moss, and to make certain that all have the same general conception of its nature, which suggests many possible uses, we devote a brief space to a general explanation:

Granulated Peat Moss is a brown, soft, and spongy matter, formed years ago by the decay of mosses and other vegetable matter. Through drainage this has been left high and dry and today is much used by horticulturists and nurseries for various purposes. It is clean and easy to handle. No odor whatsoever.

GENERAL UTILITY USES: Virgin Soil Humus.—It should be added to garden soil which usually consists of clay, loam, or sand—unsuitable in themselves, yet with this treatment, become excellent for productive results. **Lawns**—Late in autumn should have a covering of same; this will almost disappear by spring. **Shrubbery**—Mix with soil when planting for use as a mulch. **Mulching**—Will furnish excellent protection against freezing, turning it under next spring. Fine for **Rose Beds, Flower Garden, Seed Beds, Window Boxes, etc.** Descriptive Literature free.
